ENVIRONMENT

Sustainable food supply is about access to healthy foods, the ability to be stewards of the land and growing food. Urban agriculture and community gardens are key ways to enable a food system to emerge in the community. As stewards of the land, residents and community members care for the natural environment and take ownership of land. Connecting local grocery stores to urban farmers creates a prosperous system.

- 01 Community gardens for urban farming and growing healthy foods
- 02 Local grocery stores or markets to sell community-grown food
- 03 Open-air markets or farmers markets for selling food
- 04 Claiming urban land for gardening
